

Telesphere Named BOMA's New Telecommunications Provider

Phoenix, AZ (November 29, 2007) – Telesphere, a Phoenix-based telecommunications provider, and the Building Owners and Managers Association of Greater Phoenix announced the deployment of a new hosted VoIP platform. The new infrastructure will allow BOMA to communicate with its members and associates through cutting-edge IP telephony and data solutions.

The transition to Telesphere's communication technology will allow BOMA to modernize its infrastructure, and expand and save on overhead costs. Because BOMA members are frequently off-site and away from their desks, Telesphere features such as simultaneous ring and voicemail-to-email will allow the organization to function more seamlessly.

BOMA, who represents and promotes the interests of the commercial real estate industry throughout the Phoenix area, is also a primary source of information on office building development, leasing, building operating costs, energy consumption patterns, local and national building codes, legislation, occupancy statistics and technological developments.

"BOMA's goals and objectives as an organization are right in line with the service Telesphere is equipped to provide," said Clark Peterson, Telesphere Chief Executive Officer. "A major part of commercial development – whether on a large or small scale – is the technology to support the businesses that operate within its walls. By hosting voice and Internet solutions off-site, Telesphere is able to significantly reduce the cost of that investment."

Recently, BOMA switched their phone and internet service to Telesphere as a strategic upgrade allowing them the same infrastructure that until now was only available to larger corporations. BOMA representatives believe the infrastructure upgrade, designed for small and medium-sized businesses, will provide the organization with a more reliable Internet service provider and remote office capabilities that allow its employees to correspond with members more effectively.

Telesphere is a Phoenix-based managed services provider that delivers an innovative package of IP telephone service and internet access to businesses throughout the United States. Telesphere's services allow small to medium-sized businesses to enjoy all of the latest voice and data features of large businesses without the costly investment of on-premise equipment. Telesphere fully manages its customers' services over a private IP facilities-based network. It allows Telesphere customers that are spread across multiple offices throughout the country, from small business, medium business, and even home business, to function seamlessly as if they were in the same location.
